

Safe-search A+C development comparison

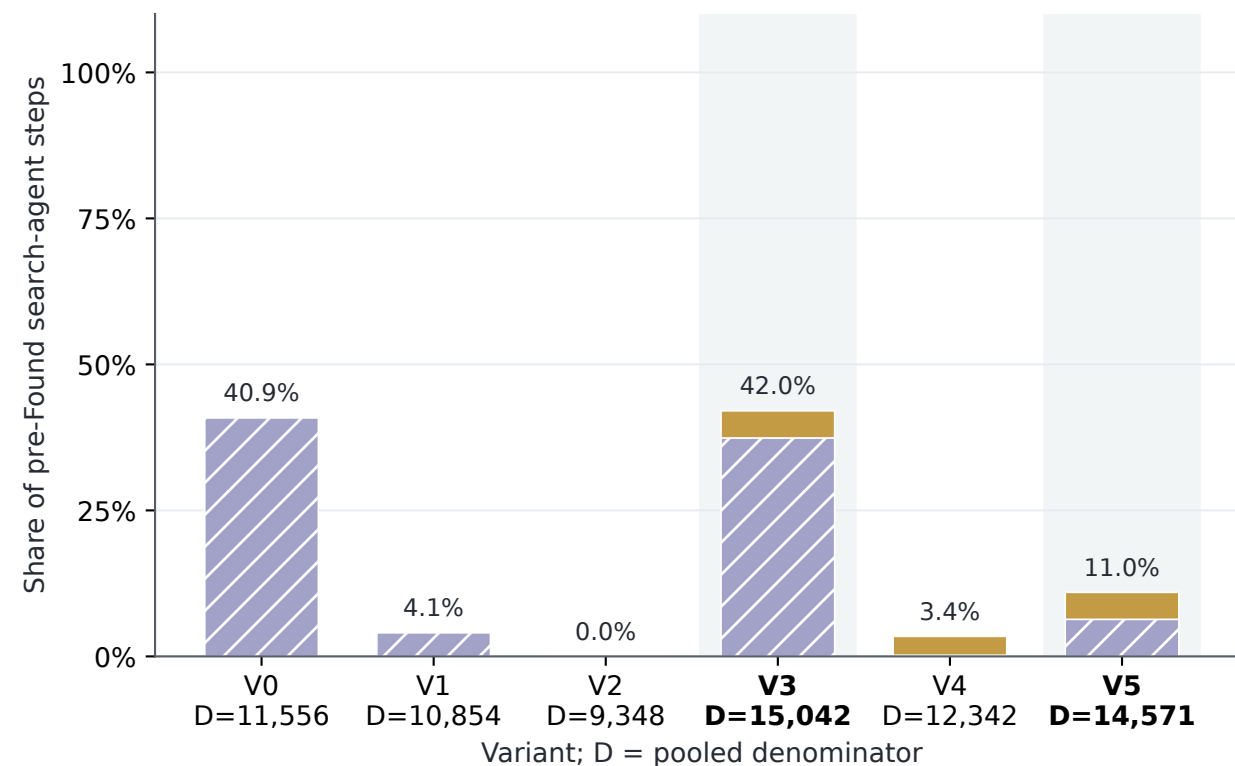

B0 | Same 20 fixed scenarios per variant | 400-step task horizon | V5 = A+C

A Mutually exclusive terminal outcomes

Pre-Found collision Post-Found failure
No-Found timeout Mission success

B Stall and Hold exposure

Stall proxy (excludes Hold)
Hold

B: pooled agent-step counts / (3 searchers x pooled pre-Found steps); the Found transition is included. Stall and Hold are disjoint. Stall is a 10-step stable-assignment motion proxy with low progress and displacement; it excludes Hold and unreachable assignments.

V3 and V5 are highlighted for comparison only. V5 is a post-hoc development addition; these bars do not establish statistical superiority. Exposure depends on discovery and collision times. Collision at the Found step has pre-Found precedence; Found is distinct from mission success.
