

Safe-search development diagnostics

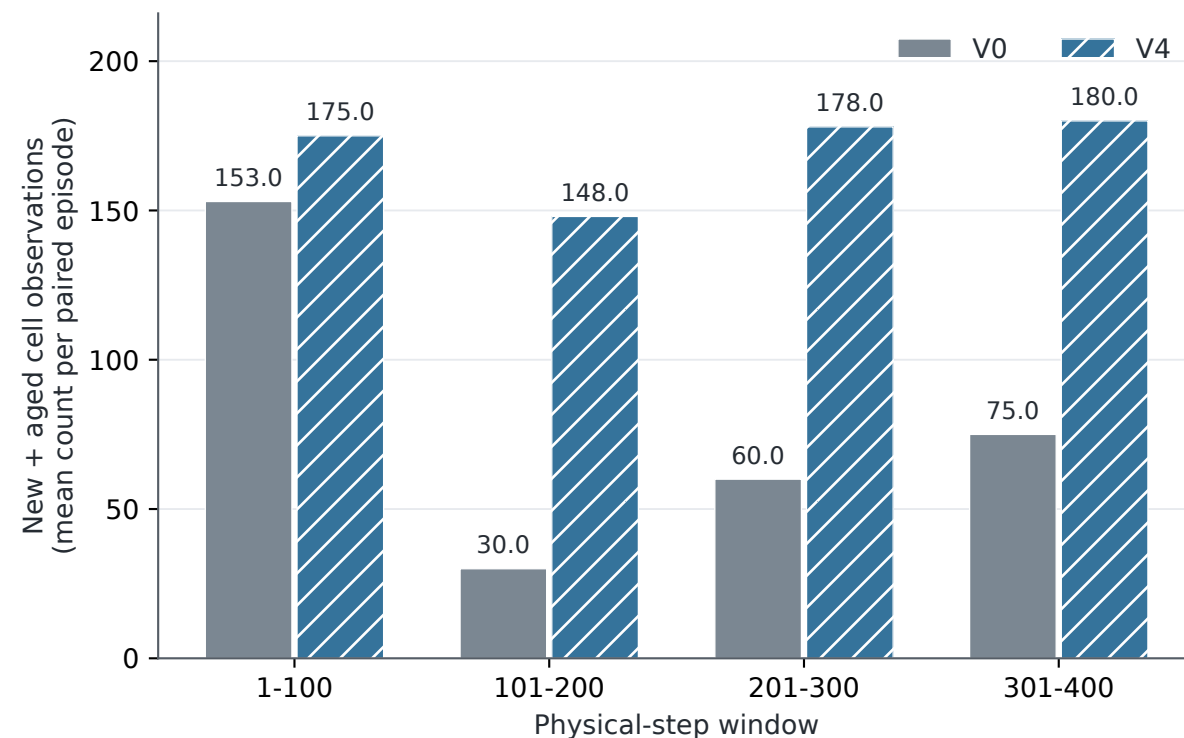

B0 | 20 fixed scenarios per variant | 400-step task horizon | Development evidence

A Mutually exclusive terminal outcomes

Pre-Found collision: searcher Post-Found failure Mission success
No-Found timeout

B Evidence renewal in persistent failures

Paired persistent-failure subset: n = 1
Both V0 and V4 ended at step 400 without Found.

B is selected by both outcomes and does not estimate an overall causal effect. Descriptive means; no inferential error bars.
New + aged target-evidence cell observations are a footprint-renewal proxy, not target detection probability.
